

To run the code please either download the .txt file or copy the text. Then open the latest **stable** version of Qgis and from the toolbar choose the tab **Processing**. From the pop-up side window press the python icon and then **Open Existing Script** and find the downloaded script. In case you have copied the text of the code please select the **Create New Script..** option (blue arrow)

Following the pop-up window comes up where you paste the text as seen in the pic. Now you can save the code by pressing the **save** button.

After saving the code or in case you have imported it you can find the code here (see next pic green box).
